

GIT GOOD CODING PRACTICES

TLAs: Three Letter Acronyms

TLA	When to use it?
BCH	branch a repository (or related)
BUG	discover a defect
CNF	change a configuration file
DOC	docs and comments
ENH	add a completely new feature or enhance an existing one
FIX	fix a bug
GUI	modify code related to the user interface
INI	initialize a repo
LIB	reorganize packages or manage packages
LOG	modify logging messages or infrastructure
MNT	general maintenance
MRG	merge a repository (or related)
REF	refactor- reorganizing code without changing its functionality
REQ	modify requirements / dependencies
SEC	modify security policies, credentials, or auth protocols
TST	add, subtract, or alter tests
VER	change the official version of this project
WIP	checkpoint on a work in progress
OOPS**	unofficial but popular - for reverting mistakes

ADD Adding a new feature

BFC Big Fucking Commit – I have no idea what I did here and it's too much/messy to figure it out

** Yes, I know, not a TLA
